

*REVIEW OF BACHELOR'S DEGREE PROGRAM IN
TELECOMMUNICATIONS AT
THE ADMIRAL MAKAROV NATIONAL UNIVERSITY OF SHIPBUILDING*

The program purpose is clearly formulated in program's profile. The goal is to prepare a highly qualified, competitive bachelor who has successfully completed the educational program and is able to solve complex specialized tasks and practical problems in the field of electronics and telecommunications during the implementation of professional activities or in the learning process, which involves conducting research and implementing innovations. The program is well defined in structure by Ukraine's National Institutional Regulations, contains taught content and provides internships and cooperative opportunities. Now the program is externally accredited by NAQA.

Compared to similar programs at other institutions, the program has a unique feature: training specialists who are capable of developing, designing, operating, and maintaining marine electronic systems and networks.

The program and the individual disciplinary or interdisciplinary subject areas meet provincial and national standards in quality, range, and depth of knowledge, skills and value that it effectively balances learning outcomes and core concepts and methodologies.

The following points highlight the main recommendations:

- 1) In order to strengthen cooperation, it would be beneficial to invite external examiners to review bachelor's theses.
- 2) Invite various stakeholders, including students, alumni, and employers, to participate in the program's realization.
- 3) Focus on the implementation of an integrated learning environment to enhance students' interactions with faculty, advisors, tutors, and other students.

Associate Professor at the Department of
Electrical Power Engineering and Mechatronics
Dr. Mahmoud M.S. Al-suod
